

EROSION AND SEDIMENT CONTROL TRAINING

February 2016

Expressions of interest for a 3 day workshop to be held in Perth, Western Australia

Specialised skills and knowledge

Erosion and sediment control (ESC) is a specialised and important part of construction projects. Poorly planned and implemented ESC can result in asset damage, land degradation, water pollution, expensive rework, and potential litigation. Taking ESC seriously and doing it properly make sound economic sense.

This training course provides participants with the fundamental concepts of erosion and sediment control, using practical examples and solutions drawn from the presenters' extensive experience across a wide range of locations, forms of construction, soils, and landscapes.

Our highly experienced trainers are leaders in ESC practice in Australia. Landloch ESC courses are approved by the nationally recognised International Erosion Control Association (Australasia) and will assist participants planning to gain professional ESC accreditation.

TOPICS COVERED

- ESC principles
- Erosion - risk factors, types and impacts
- Erosion hazard assessment
- RUSLE and its use
- Developing ESC Plans
- Correct choice of controls
- Implementation & monitoring
- ESC hydrology & hydraulics

VENUE

To be advised

REGISTRATION

Please register your interest by email no later than 31 January 2016.

COST

\$2,100 (inc GST)
Morning tea & lunch provided

WHO SHOULD ATTEND?

- Construction Managers
- Design Engineers
- Environmental Managers
- Council & Govt. Regulators
- Rehabilitation Practitioners
